

Avail LIS™

Electronic Health Record compatible products from LabSoft, Inc.

Avail LIS works in conjunction with an electronic medical/health record (EMR/EHR) & allows for the management of laboratory testing performed within a medical practice or clinic.

Avail LIS is a simple to install, easy to learn and use laboratory information system (LIS) that works in conjunction with an EMR. Laboratory test orders are placed in the provider's EMR and are digitally transmitted directly to Avail LIS. Avail LIS will then employ virtual intelligence to route lab testing to the appropriate in-house diagnostic analyzer and/or external reference laboratory. Manual tests can easily be added while completed results can be reviewed and edited prior to sending to the provider's EMR. Avail LIS will provide an up to the minute status report of patient tests as they are processed in the appropriate locations.

Typical features include:

Fast and accurate sample routing to in-house, hospital and external reference lab locations

Continual sample tracking and test status updates

Completed results review, editing and commenting, before transmitting to provider EMR

Enhanced in-house analyzer connectivity and process/work flow management

Automated test code and billing information transmission to billing systems
