

LabSync™

Electronic Health Record compatible products from LabSoft, Inc.

Labsync allows for the bidirectional interfacing of electronic medical/health records (EMR/EHR) to reference laboratories.

Laboratory test orders are placed in the provider's EHR and are electronically transmitted directly to the reference lab of choice. When testing is completed, results are digitally transmitted back to the originating EHR for review, acceptance and storage in the patient's EHR file.

Typical features include:

Fully Bi-directional Interface to major national reference laboratories such as:
Quest, LabCorp, ARUP, Specialty and others

Increased time and cost savings by automating inefficient paper based processes

Enhance the power of the provider's EHR by digitally and automatically
transmitting lab orders to reference labs and receiving patient results back
into the provider's EHR

HIPAA Compliant Data security enhanced by the ability to digitally transmit lab
orders thereby minimizing transcription and interpretation errors

Patient safety and care through faster turn around time (TAT) of patient results
and enhanced opportunity for continuity of patient care

Increased revenue generation with higher volumes of lab testing, results
reviewing, lab test billing and time and cost savings
